

Intelligent Management Terminal 19270XX

Abstract

With the use of central inverters it's very important to combine the available DC-strings to few collective DC-conductors. Our iMT is the central hub for all iATs in a system – here, all the information is gathered. We provide several variations of the iMT. The simplest version uses a control-terminal as display for visualizations.

Outline

- ◆ 230 V-AC power supply (0,5 A) / 24V-DC
- ◆ DC String current indicator
- ◆ DC open fuse display
- ◆ DC (iFT) current comparison
- ◆ Alarm- and failure display with acknowledgement
- ◆ Connectivity options: TCP/IP, fibre-optics or FTT10A LonWorks
- ◆ Possibility of connection to external gateways
- ◆ Possibility of connection to an internet portal

Important details

The system can be customized for a local inverter-topology.
